PERIODICAL: Tsvetnyye Metally, 1957, No.12, pp. 1 - 6 (USSR)

ABSTRACT: At the Darasun Concentration Plant, gold polymetallic sulphide ores are treated, gold losses occurring mainly with arsenopyrites (Ref.1). The authors discuss gold distribution in different size ranges of the tailings and mention that although a two-stage flotation was recommended as being capable of reducing gold loss to 0.4 - 0.5 g/ton, this has not been adopted because the plant was designed for single-stage flotation. They outline work aimed at developing a method suitable for the conditions at Darasun. . . The procedure adopted was based on practice at White Pine (USA) (Ref.4) on the repeated flotation of tailings after their preliminary de-sliming. V.V. Pasechnikova, Engineer, participated in the successful laboratory testing of the method. The authors describe the full-scale testing of the method with the use of 350 mm diameter hydrocyclones, giving the flowsheet (Fig.1) and data on hydrocyclones efficiency (Figs. 2, 3) and explain the relatively low Card1/2 efficiency when the content of gold and arsenic in the general

tailings was abnormally high. They give full-scale results confirming the combination with arseno-pyrite of the gold remaining in the collective flotation tailings. Discussing plant operation before and after the introduction of the new method (Table 3), the authors conclude that the additional operating costs are soon recouped by gold-recovery profits at the rate of 700 000 roubles per annum. There are 4 figures, 3 tables and 3 Russian and 1 English references.

ABSTRACT: An Author Certificate has been issued for a method of recording
weak explosions and earthquakes based on determination of the interrela-
tion function of seismic vibrations. To improve the quality and reliability
of measurements, the values of the function obtained for a number of
receiving points arranged along the profile are summed up with the vary-
ing time shifts corresponding to those predetermined by the location of
the receiving points along the profile. [LD]
